Abstract

This study aimed to identify the status of articles published in the Quarterly Journal of Razavi Culture. The research approach is quantitative and the research method is content analysis. The required information was received from the Journal website. Bibliographic information of the article along with organizational affiliation and academic rank and field of study of researchers as well as abstracts and keywords of articles in the Excel file were fully entered. Then, after three stages of cleaning, these data were entered into graph production software and as a result, scientific graphs and maps as well as diagrams were received from the software and then described and analyzed. The results showed that 291 authors contributed to the journal. Of these, only %1 of authors have 5 articles published in 32 issues of the journal. Also, five universities, including Imam Šādiq (as) University, Ferdowsi University of Mashhad, Allameh Tabatabai University, Razavi University of Islamic Sciences and al-Zahrá (as) University constitute more than %60 of the organizational affiliation of researchers. Among academics, faculty members with the rank of assistant professor have the most collaboration with the journal. Findings indicate that less than %25 of women cooperate in publishing articles, and researchers in the field of Qur'anic and Ḥadīth sciences alone have obtained the first rank with 103 articles.

Keywords: Quarterly Journal of Razavi Culture, Content Analysis, Scientific Map, Scientific Measurement.
